

DIRECT CONTACT WATER HEATER - Low NOx

The Kemco low NOx heater has a nozzle-mix type burner fitted with specially-designed combustion chamber. The heater is guaranteed to produce less than 9 ppm of NOx when the heater is operated at design conditions and in accordance with operating procedures.

Recent Project Achieved

- 7.6 ppm NOx
- 150 ppm CO @ 99% Thermal Efficiency

- ➔ Swing-Away Air Housing provides easy access to internal components. No disconnection of fuel or power lines required.
- ➔ Rugged Surface Stabilized Premix Combustion Element ensures quiet combustion and ultra-low NOx/CO emissions throughout entire firing range.

- ➔ Ultra Low NOx Emissions, below 9 ppm achieved without FGR
- ➔ UL/cUL Listed from 2.5 to 25 MM BTU
- ➔ Designed to meet the standards of Air Quality Management Districts
